

## Weekly Market Update

**Primary market environment:** The flood of issues on the primary markets continues. Corporate bankruptcies in Germany increased in 2022. In the USA, CPI data showed that price dynamics continued to decline at the end of last year. The confidence of market participants that key interest rates in the Eurozone will be raised less significantly in the future remains unbroken.

### Primary market barometer

#### SSA

Issuing activity in the SSA segment also picked up momentum at the beginning of this week. Overall, however, it must be stated that a certain normalisation is becoming apparent. The oversubscription rates, for example for the EFSF, are no longer as significant as they were last year.

#### Covered Bonds

The flood of issues on the primary market continued with high momentum in the second week of the year. The maturities chosen by the issuers as well as the level of spreads and new issue premiums play a significant role. Overall, issuance is going well at the moment.

#### Senior Unsecured

The flood of new issues continues to rise; the volume recently placed in this segment is record-breaking. Investors remain sensitive, but are being persuaded by attractive yields. Issuers will continue to make active use of open market windows in view of high maturities.

### Risk trend indicator: No all-clear

The picture of our risk trend indicator hardly differs from that of the previous week. The prevailing risk aversion in the market continues.

## SSA

As we expected, SSA primary market activity picked up significantly this week. A total of 15 transactions with a volume of EUR 25.75 billion were successfully concluded. Issuers from different jurisdictions such as the ESFS and Export Development Canada were represented with maturities of up to 20 years. The marketing of the EFSF started with an initial spread target of MS -22 for the 2026 maturity and MS + 8 for the 2033 maturity. Given that the upper books were oversubscribed by 2.5 and 2.9 times respectively, the spreads were ultimately able to tighten by 2 bp. for both tranches.

The SSA market environment is currently favourable, so that the majority of issuers met with good demand. However, there are signs of normalisation in the oversubscription rates. In our view, the increasing trend in new issue premiums - partly due to the large number of issues - also played a role. The ASW spreads of the SSAs continue to run out, and in some cases, such as for Supras and the Agencies, new 52-week highs were recently marked. These are considered to be procyclical in nature, so that the probability of a continuation of the trend direction is high.

**Outlook:** We expect the lively issuing activity to continue in the coming weeks. Issuers and investors alike are taking advantage of the opportunities that present themselves.

## Covered Bonds

This week, the high level of issuing activity that had already begun in the previous week continued. A total of 13 issues with a total volume of EUR 12.25 billion were placed. A trend towards dual or multi-tranche transactions is currently emerging. With this type of transaction structure, it is possible to address different groups of investors who are interested in different maturities. DZ Hyp, BPCE SFH and Deutsche Bank chose such a format this week. It was DZ Hyp's 3-year green covered bond that stood out with an order book of around

*"The second trading week, unsurprisingly, continues to be dominated by high-pressure primary markets. In the process, the daily deluge of fresh product in all asset classes is leading to elevated NIPs - a textbook buyer's market. The main reason for the high level of activity, even taking seasonal patterns into account, is undoubtedly the central banks' imminent withdrawal from QE measures. These had strongly supported the market for years. "*

*Comment from the Helaba trading floor*

EUR 4 billion and eight times oversubscription. Overall, demand continues to focus on the short to medium maturity range. Remarkably, it is again possible to successfully place longer maturities of 10 years, for example. New issue premiums remain at an elevated level. As in the previous week, price sensitivity in the order books remains high in some cases, which limits the potential for tightening spreads. Overall, the chance of tightening spreads is still greatest for short-dated issues of "national champions", especially if the issue volume was already limited at the beginning of marketing.

On the **secondary market**, risk premiums on existing bonds are being pulled upwards as a result of the usual switching activities of clients, "out of old, into new". In terms of maturities, short maturities remain the sweet spot. A widening of secondary market spreads can be observed.

According to the statements of Isabell Schnabel, member of the Executive Board of the European Central Bank (ECB), green investments will probably be given greater importance by the central bank in the future. Initially, it seems that supras, agencies and corporates will be in the focus. Such an approach should ultimately also affect covered bonds. In our opinion, this would give green covereds in particular, but also other ESG covereds, relative spread support.

**Outlook:** In our view, the high volume of issuance is likely to continue in the coming weeks. In particular, high maturities and the ECB's continued activities until the end of February support this trend.

## Senior Unsecured

The flood of new issues continues to rise - even for a start of the year, the last few days have been record-breaking. In the first three trading days of the current week alone, a volume of EUR 12.8 billion in senior unsecured bank bonds in EUR benchmark format with fixed coupons came to the market. Of the total of 15 transactions, 13 were preferred-ranked. Our expectation that issuers will make increased use of this asset class in the current year is therefore more than fulfilled.

In the receptive market environment, issuers are managing to structure transactions in line with demand and also to push through somewhat longer maturities. Investors, on the other hand, continue to have shorter investment horizons and are highly spread-sensitive, as is also evident from the dual tranche deals. It is also striking that floaters are being placed again in the current interest rate environment.

While the primary market remains in focus in the second trading week of this year, the secondary market is slowly getting into swing. However, the spreads of recently issued bonds developed quite differently. Issuers seem to want to waste no time and are taking advantage of the open market window to refinance their extensive maturities this year. The friendly market environment with a confident credit outlook for the banking industry is paving the way for this.

In our [outlook for 2023](#) published yesterday, we expect the credit trend for the European banking sector to remain stable. The sector could once again be one of the outperformers in 2023, not least thanks to further increases in interest rate gains. In addition, following the regulatory reforms of recent years, institutions have very robust balance sheet quality with high capital ratios.

**Outlook:** The issuance needs of European banks in 2023 are again extremely high. The main reasons for this are high maturities and regulatory requirements for total liable capital (MREL/TLAC). We therefore expect a record volume of around EUR 180 billion of fixed coupon EUR benchmark bank bonds to come to the market in 2023 as a whole, unchanged from the previous year (see our publication "[Primary Market Update EUR Benchmark Bank Bonds](#)" of Jan. 9, 2023). Issuers will therefore continue to make active use of open market windows and lose no time in doing so.

### Ukrainekrieg und Inflation sind Hauptsorgen

Reasons for providing overlays in credit risk provisioning for reasons other than COVID-19.

Sources: EBA, Helaba Research & Advisory

*„On the secondary market, new issues continue to be the benchmark. The respective performance in secondary trading is mixed. Despite the mass of new issues, turnover is lagging expectations and relatively few "old" bonds are being sold to free up lines for new issues. Surprisingly, some real money accounts are already starting to offload the new issues. This is usually more familiar from another counterparty group.”*

Leisure tip for the weekend: Merkers Adventure Mine, (Krayenberg municipality OT Merkers)

Deep beneath the hills of the Rhön, a valuable treasure has been buried for millions of years: Potash rock. For almost a hundred years the minerals were mined in the Merkers mine, and now you can explore this special place for yourself. Experience hands-on mining technology, follow the traces of the legendary Reichsbank treasure in the historic gold room, and marvel at the sparkle of the giant salt crystals in the crystal grotto, the only one of its kind in the world.
